CLAIMS

- 1. An optical device wherein the direction of beam propagation is selected to be other than those of the (111)-axis direction of a crystal belonging to equi-axis crystal system to reduce birefringence effects based on photoelastic effects due to centrosymmetrically induced stress.
- 2. The optical device according to Claim 1, wherein the direction of beam propagation is selected to (100)-direction of crystal.
- 3. The optical device according to Claim 1, wherein the direction of beam propagation is selected to (110)-direction of crystal.
